### 3 Introduction

The following document details the Module Interface Specifications for Greenway.

Complementary documents include the System Requirement Specifications and Module Guide. The full documentation and implementation can be found at <https://github.com/mehtaj8/Greenway>.

### 4 Notation

The structure of the MIS for modules comes from HoffmanAndStrooper1995, with the addition that template modules have been adapted from GhezziEtAl2003. The mathematical notation comes from Chapter 3 of HoffmanAndStrooper1995. For instance, the symbol  $:=$  is used for a multiple assignment statement and conditional rules follow the form  $(c_1 \Rightarrow r_1 | c_2 \Rightarrow r_2 | \dots | c_n \Rightarrow r_n)$ .

The following table summarizes the primitive data types used by Greenway.

Data Type	Notation	Description
character	char	a single symbol or digit
integer	$\mathbb{Z}$	a number without a fractional component in $(-\infty, \infty)$
natural number	$\mathbb{N}$	a number without a fractional component in $[1, \infty)$
real	$\mathbb{R}$	any number in $(-\infty, \infty)$

The specification of Greenway uses some derived data types: sequences, strings, and tuples. Sequences are lists filled with elements of the same data type. Strings are sequences of characters. Tuples contain a list of values, potentially of different types. In addition, Greenway uses functions, which are defined by the data types of their inputs and outputs. Local functions are described by giving their type signature followed by their specification.
